

StateWORKS Price list 2011**Software development tools**

Product	Number of user licenses	Unit Price [EUR]	Notes
StateWORKS Studio PRO Professional Edition with Standard Executor ²⁾	1	1450	Multiple user license packs available at discounted volume pricing
StateWORKS Studio PRO Professional Edition with thinStates Compiler ³⁾	1	1450	Multiple user license packs available at discounted volume pricing
StateWORKS Studio BAS Basic Edition with Standard Executor ²⁾	1	750	Design and run-time limited to 300 objects
StateWORKS Studio BAS Basic Edition with thinStates Compiler ³⁾	1	750	Design and run-time limited to 300 objects
StateWORKS Studio BASe Basic Edition for educational purpose with with Standard Executor or FSM code Generator	Lab	please contact us	Design and run-time limited to 300 objects Limited support
StateWORKS Studio LE Light Edition	-	free ¹⁾	Design and run-time limited to 1 state machine, 100 objects. No support
support			
StateWORKS Studio Support and Maintenance (after 1 year)	-	15% of the purchase price (per year)	

- 1). It can be acquired only with the book "Modelling Software with Finite State Machines".
- 2). Standard Executor is an RTDB based application that use TCP/IP channels for I/O Handler.
- 3). The thinStates Compiler is a FSM Code Generator.

The listed prices don't include VAT, which needs to be added in certain circumstances for delivery within the European Community.

We deliver software packages either as a download or on a CD. A software package contains all accompanying documents: manuals, technical notes, tutorials as pdf files. Paper documents are generated only on an explicit client's order.

Run-time systems

Run-time systems are built using the RTDB library. The RTDB library contains a ready VFSM Executor able to process a system of state machines. The RTDB is an integral part of a real time data base which handles conversions between real time input / output signals and the virtual environment where the state machines operate.

The StateWORKS Studio contains the RTDB based Standard Executor for application that use TCP/IP channels for I/O Handler

We can supply the RTDB library for creation of applications in various environments: writing of your own code for the state machines is eliminated by making use of these Posix-compatible real time libraries. Suitable for Windows™, Linux, VxWorks™ and various other RTOS. Contact us for licensing details.

Using thinStates compiler code

The code generated by the thinStates compiler relies on user's specific include files to resolve for the names involved in the state machine definition.

The user must supply the implementation for the invoked macros, in order to connect the generated logic to the real world.

Training courses

Topic	Duration (days)	Price [EUR] (single person)	Price [EUR] / Person (for 2-4 persons group)
VFSM Technology and StateWORKS	1	990	490
StateWORKS Studio	3	2400	1400
StateWORKS Run-time system	3	2700	1600

The listed prices don't include VAT, which needs to be added in certain circumstances for delivery within the European Community.

Other expenses associated with each course (travel, hotel and living charges) will be negotiated for each order.

Training courses are offered in English and German.
